Backend engineer with 7 years of experience designing distributed systems and APIs in Go and Node.js.

TECHNICAL SKILLS

Languages: Go, Node.js, TypeScript, SQL

Cloud: AWS, Docker, Kubernetes

EXPERIENCE

Senior Engineer, Company 1 Jan 2015 – Dec 2016

Austin, TX

- Built and operated service 1 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 2 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 3 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 4 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 5 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.

Senior Engineer, Company 2 Jan 2017 – Dec 2018

Austin, TX

- Built and operated service 1 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 2 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 3 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 4 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 5 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.

Senior Engineer, Company 3 Jan 2019 – Dec 2020

Austin, TX

- Built and operated service 1 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 2 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 3 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 4 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 5 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.

Senior Engineer, Company 4 Jan 2021 – Dec 2022

Austin, TX

- Built and operated service 1 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 2 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 3 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 4 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.
- Built and operated service 5 handling high throughput with careful capacity planning, observability and on-call rotations -> improved reliability.

EDUCATION

UT Austin 2010 – 2014

B.S. Computer Science

CERTIFICATIONS

AWS Solutions Architect - Amazon 2021
